

Index

Chapter 1

Introduction	11
1.1 Distributed Hierarchical Management	13
1.2 Policy-based Management Systems (PBMS)	15
1.3 Contributions of this Thesis	18
References	19

Chapter 2

Policy-based Architectures	21
2.1 IETF Policy System Architecture	22
2.1.1 Policy Framework Components	23
2.1.2 Policy Structure	25
2.1.3 Policy Roles	27
2.1.4 Policy Core Information Model (PCIM), Policy Core Information Model extensions (PCIMe) and Policy Core LDAP Schema (PCLS).....	28
2.2 OMG Policy System Architecture	32
2.2.1 CORBA policies for QoS	33
2.2.2 Management of a system based on CORBA policies	36
2.2.3 CORBA policies for Intelligent Buildings	39
2.2.4 CORBA policies for OSA/PARLAY	41
2.3 Contributions in this chapter	42
References	43

Chapter 3

Proposal of a Policy-based Management Architecture	48
3.1 General Functioning of the system	51
3.2 Management system components	53
3.2.1 Monitoring process	53
3.2.2 Routers based on differentiated services	54
3.2.3 Policy Enforcement Points (PEPs)	55
3.2.4 Provisioning process	56
3.2.5 Policy-based Admission Control	56
3.2.6 Policy editor.....	58
3.3 Distribution policy mechanisms	62
3.4 Policy levels.....	63
3.4.1 Conversion of service level policies into network level policies	65
3.4.2 Conversion of network level policies into devices configuration	66
3.5 Classes of Services mapping (CoS)	67
3.6 Creation of SLS Profiles	72
3.7 Contribution in this chapter	76
References	77

Chapter 4

Policy Repository	81
4.1 LDAP mapping of the Policy Core Information Model (PCIM) extensions to an LDAP schema	82
4.1.1. Attaching Policy Variable and Policy Values to PolicySimpleCondition and PolicySimpleAction	86
4.1.2 Aggregation of actions / conditions in PolicyRules and CompoundActions/Conditions.....	86

4.2 Applications, examples.	91
4.2.1 Example 1	91
4.2.2 Example 2	97
4.3 Contribution in this chapter	104
References	105

Chapter 5

Methodology for selection and evaluation of policies:

Application for routing management	106
5.1 Policy-based routing	107
5.1.1 Policy-based Intra Domain Routing	109
5.1.2 Policy-based Inter Domain Routing	119
5.2 Policy-based algorithm for path selection	122
5.3 Contribution in this chapter	128
References	130

Chapter 6

Conflict Resolution	134
6.1 Geometric representations for the resolution of conflicts	138
6.1.1 MEF (Finite Element Method)	141
6.2 Contributions to the chapter	144
References	145

Conclusions and Future Lines	147
---	-----

Appendix I

Policy Core Extension LDAP Schema (PCELS)	150
I.1 Inheritance Hierarchy for PCELS	150
I.1.1 Class Definitions	153
I.2 Security Considerations	176
I.3 IANA Considerations	177
I.4 Open Issues	178
References	179

Appendix II

Policy system implementation	180
II.1 Network node configuration	181
II.2 Monitoring process Implementation	184
II.3 Oracle database Parameters	186
II.4 Router agents	190
II.5 Graphical Representation Application	195
II.5.1 Initiate the refinement mode / Finish the refinement mode	202
II.5.2 Conclusions about the application	205
II.6 Stages to follow in order to start the functioning of the Routing Distributed System based on PBMS	206
References	210
