## **Abstract**

This dissertation aims at investigating how global narratives on forest carbon offsetting create value and influence what carbon markets deliver, how and for whom. It engages a conventions theoretical framework and a discourse analytical approach to analyze different conventions mobilized in the narratives used by actors in the carbon value chain. A case study of the *Scolet Té* forest carbon offsetting program in Chiapas, Mexico is examined. The ideological and material values and meanings that are emphasized in stories about forest carbon offsetting influence the support for these approaches and also transmit pro-environmental values to forest carbon offset producers. This dissertation demonstrates how actors at different scales mobilize conventions to both support the creation and valorization of carbon offsetting activities and to influence how communities manage tropical forests. At the same time, incoherencies between wider narrative claims that focus on delivering local benefits mobilize consumers of carbon offsets yet clash with producer motivations and perceptions of incentives to change environmental behavior. Empirical results further illustrate how discourses of carbon offsetting circulate bi-directionally between scales, and how local perceptions of discourses of climate and environmental change are taken up differently (or not) and reflected in the everyday practices of forest and agricultural activities, and how conventions create value in offset markets which is adapted to local institutions and mobilized by producers for different aims (e.g., to gain credibility and legitimacy). These findings suggest that considering both material incentives and discursive constructions could contribute to better understanding the so-called “non-carbon” values embedded in carbon forestry and further explore the socio-economic motivations to support carbon markets, to produce and consume carbon offsets, as well as the unintended consequences for producers of voluntary carbon offsets.

*Keywords: Voluntary carbon offsets, forests, carbon markets, conventions theory, participation, Mexico*

## **Abstract**

Questa tesi si propone di studiare come le narrazioni globali sulle compensazioni forestali del carbonio creino valore e influenzano ciò che i mercati di carbonio forniscono, in che maniera e a beneficio di chi. Si confronta con l'impianto teorico delle convenzioni e con l'approccio dell'analisi del discorso con il fine di esaminare le diverse convenzioni mobilitate nelle narrazioni impiegate dagli attori che partecipano alla catena di valore del carbonio. Viene esaminato il caso di studio del programma forestale di compensazione delle emissioni di carbonio *Scolet Té* in Chiapas, Messico. I valori ideologici e materiali e i significati che vengono enfatizzati nei racconti sulla compensazione forestale del carbonio influenzano il sostegno che tale approccio riceve e, inoltre, diffondono valori pro-ambientali tra i produttori delle compensazioni forestali del carbonio. Questa tesi dimostra come gli attori, su scale differenti, mobilitino le convenzioni sia per sostenere la creazione e la valorizzazione delle attività di compensazione di carbonio sia per influenzare come le comunità gestiscono le foreste tropicali. Al tempo stesso, le incoerenze esistenti tra i più ampi enunciati narrativi, che si concentrano sull'erogazione di vantaggi a livello locale, mobilitano i consumatori dei crediti di carbonio anche se si scontrano con le motivazioni dei produttori e con la loro percezione degli incentivi a cambiare il comportamento ambientale. I risultati empirici descrivono ulteriormente come il discorso della compensazione del carbonio circoli in maniera bidirezionale tra le scale, come le percezioni locali del discorso del cambiamento climatico e ambientale locali siano (o meno) adottate in modo diverso e si riflettano nella pratica quotidiana delle attività agricole e forestali, e come le convenzioni creino valore nei mercati dei crediti di carbonio in una forma tale che si adatti alle istituzioni locali e sia mobilitato dai produttori per diversi scopi (ad esempio per ottenere credibilità e legittimità). Questi risultati suggeriscono che prendendo in considerazione sia gli incentivi materiali sia le costruzioni discorsive si può contribuire ad una migliore comprensione dei cosiddetti valori "senza carbonio" incorporati nel settore forestale finalizzato alla compensazione del carbonio ed esplorare ulteriormente le motivazioni socio-

economiche alla base del sostegno per i mercati del carbonio, alla base della produzione e consumo delle compensazioni di carbonio, nonché le conseguenze non intenzionali sofferte dai produttori di crediti di carbonio volontari.

*Parole chiave: compensazioni di carbonio volontarie, foreste, mercati del carbonio, teoria delle convenzioni, partecipazione, Messico*

## Resumen

Esta tesis tiene el objetivo de investigar cómo las narrativas globales alrededor de los bonos de carbono en el sector forestal crean valor e influyen lo que los mercados de carbono otorgan, cómo y a quién. Se relaciona con el marco teórico de las convenciones y con el enfoque del análisis del discurso para analizar las diferentes convenciones movilizadas en las narrativas utilizadas por los actores involucrados en la cadena de valor del carbono. Se examina un estudio de caso del programa forestal de captura de carbono *Scolec Té* en Chiapas, México. Los valores ideológicos y materiales y los significados enfatizados por las historias sobre las compensaciones de carbono forestales influyen el apoyo hacia esos enfoques y, además, difunden valores proambientales entre los productores de bonos de carbono en el sector forestal. Esta tesis demuestra cómo los actores, a diferentes escalas, movilizan las convenciones con el fin tanto de apoyar la creación y valorización de las actividades de compensación de carbono como de influir en el manejo de los bosques tropicales por parte de las comunidades. Al mismo tiempo, las incoherencias entre enunciaciones narrativas más amplias, que se enfocan en otorgar beneficios locales, aun movilizándolo a los consumidores de los bonos de carbono, chocan con las motivaciones de los productores y con sus percepciones de los incentivos para cambiar su comportamiento ambiental. Los resultados empíricos aclaran más a fondo cómo los discursos alrededor de la compensación de carbono circulan bidireccionalmente entre las escalas, cómo las percepciones locales de los discursos alrededor del cambio climático y ambiental son adoptadas de manera diferente (o no) y se reflejan en las prácticas cotidianas de las actividades agrícolas y forestales, y cómo las convenciones crean valor en los mercados de bonos de carbono de manera tal que se adapte a las instituciones locales y sea movilizadas por los productores para diferentes objetivos (por ejemplo, para obtener credibilidad y legitimidad). Estos hallazgos sugieren que, al tomar en cuenta tanto los incentivos materiales como las construcciones discursivas, se podría contribuir a una mejor comprensión de los llamados valores “sin carbono” que están arraigados en el manejo forestal enfocado a la captura de

carbono y a explorar más a fondo las motivaciones socioeconómicas detrás del respaldo a los mercados de carbono, detrás de la producción y consumo de los bonos de carbono, así como las consecuencias no deseadas que afectan a los productores de compensaciones voluntarias de emisión de carbono.

*Palabras clave: compensaciones voluntarias de emisión de carbono, bosques, mercados de carbono, teoría de las convenciones, participación, México*

## Preface

This thesis is a collection of three empirical manuscripts for publication, one of which was published in *Geoforum* in 2015 and another two that are currently in the process of peer review in other journals. I have not included three more peer-reviewed papers which resulted during the PhD process in this dissertation – one is a collaborative paper, published with some my colleagues from the European Forest Institute (EFI) winter-summer school (where much of this research began to take shape) in the *SEEFOR South-east European Forestry* journal in 2015. It seeks to relate the concepts of sustainable forest management, economic and non-economic valuation and sustainable development to the current ideology of sustainability in forestry and discusses the historical dimension of shifting paradigms, from production- to service-based forestry management through a review of spatial, cultural and temporal differences in valuation. Another collaborative paper, published with four colleagues from the EU-FP7 TESS project ([www.tess-transitions.eu](http://www.tess-transitions.eu)) explores the discourses, rationalities and expectations of community initiatives seen to play an essential role in a societal transition towards a low-carbon and sustainable future and was published in *Environment and Planning A* in 2017. Finally, a paper co-authored with Maryna Henrysson is currently under review in *Energy Research and Social Science*, which explores the diversity of claims ascribed to energy systems transitions within wider perspectives for development and climate change strategies in Mexico, as well as Vietnam.

This doctoral research was also carried out as part of a co-tutela between the Università di Roma La Sapienza and the Universitat Autònoma de Barcelona (UAB). I began my doctoral studies in Rome in 2010, with a fellowship sponsored by the Italian government for foreign nationals educated abroad, and in the MEMOTEF Department with a team of economic geographers. About a year into the PhD I attended the EFI winter-summer school on “Making values work – exploring multiple perspectives in understanding the valuation of forest ecosystems” where I met Esteve

Corbera and which eventually led me to the Institut de Ciència i Tecnologia Ambientals (ICTA) in Barcelona. The paper published with colleagues I met through the EFI reflects the earlier phase of the PhD research in which I was primarily conducting the literature analysis and refining my theoretical foundation and developing the analytical approach I would later apply in the dissertation. Working with a critical geographer and a political ecologist as my supervisors engaged me with a diverse range of literature and perspectives, addressing similar issues with different lenses and eventually led to attempt at combining conventions theory to look at forest carbon offsetting as a means of climate change and development. In both universities I was engaged in collective projects and networks, such as the ERA-Net BiodivERsA INVALUABLE project ([www.invaluable.fr](http://www.invaluable.fr)) and the TESS project. The former was focused on analyzing the use of markets, economic instruments and collective action for governing biodiversity and ecosystem services and helped guide part of my fieldwork and analysis of the case study. Instead, I was involved in the latter TESS project during an interim period of my PhD and my participation helped develop key concepts and debates for the dissertation as the project required engaging with a diverse range of activities, including not only writing deliverables and policy recommendations, but also carrying out qualitative interviews and surveys with a diverse range of organizations and actors involved in networks for climate change mitigation and development.

Bridging two the two worlds between an Italian geography department and a Spanish environmental science research center helped to extend my analysis beyond the confines of either one discipline or environment. As part of the collaboration between the two universities, I spent time in both – starting in Rome in 2010, Barcelona in 2011-2013 (with an interim period of fieldwork in Mexico in the fall of 2012), and again in Rome from 2013 to today. Being involved in two international research projects which documented the role of different actors, organizations and approaches in facing the challenge of climate change, albeit in very different ways, allowed me to

integrate perspectives from geography with environmental social science and political ecology in this thesis.

## Acknowledgements

First of all, the information and data gathered for this thesis was only made possible thanks to the people, communities and organizations I worked with in Chiapas. I am grateful to Dona Maria and Don Gustavo whom I am already looking forward to getting back to see, Lorena Soto, whom I thank for welcoming, supporting and advising me throughout the entire fieldwork process, everyone at AMBIO, and especially Sotero, Tito, Nico, Geronimo, Gerardo, and Luis, for making me feel welcome and helping me with all the logistics of the field work, to Manuel and Filadelfo for their time, hard work, opinions and experience. The wonderful, kind and welcoming people (and especially little people who kept me company non-stop) in Alan'kantajal-Samaria-kantajal, Josefa Ortiz de Dominguez, Nuevo Rodulfo Figueroa, and San Felipe Jataté for offering to share their homes and stories with me, their knowledge and experiences.

I want to express my appreciation to the supervisors of this dissertation, Filippo Celata and Esteve Corbera. Filippo has been a beacon of support and faith that never wavered; without him, I would have never gotten this far in the process. More than a year later, Esteve Corbera welcomed me at ICTA-UAB and into the world of *Scolet Té*. To both of them, I owe my gratitude and appreciation for their continued constructive criticism, support and guidance that has led me throughout the research process, without their insights I would have not been able to follow a research path and I wouldn't be here now writing this acknowledgement.

The MEMOTEF team in Rome (both present and past) has been an invaluable source of personal, creative and professional support. I brindisi con Venere e Raffa, random bouts of food poisoning abroad and keeping me going with much needed coffee breaks are only some of the signs of the special bond we've developed both inside and outside the department. Sono infinitamente grata per avervi accanto! To Cesare and Simona, thanks for the laughs, the camaraderie and the friendship built before and after Chicago, for teaching me about Italian pop music and even how to make a *formal*

*complaint*. Giuseppe might be on the other side of the world but he is a fond part of the original MEMOTEF crew in my recollection. Augusto was the first person I met in the department and he's made me feel at home there from the moment I entered the corridor. Giorgia and Francesca Z. have been intermittent parts of this process and I have truly enjoyed both their friendships.

To my LUMES family, I hope we will continue on for years in our collective *cheeriness*. Fab, Ahoo and Isaac, I'm so grateful to have had you around these years. Your friendship and emotional support, late night talks and walks have been an incredible source of energy and life. Roseann and Ruth, thank you for your hilarity and love. Maryna, thanks for understanding me and supporting me in this process like nobody else could have. Seb, you have been a huge boost to the system, a breath of fresh air and I have appreciated your solidarity through it all.

I also want to thank the entire TESS team who, although not being directly tied to this dissertation research, have provided an important support group and showed me what wonderful academics there are in the world. Much of what I applied in the latter half of the thesis period was thanks to conversations and discussions, conferences and workshops connected to the TESS team of researchers. Thank you to Filka, Lucia, Isabelle, Jurgen, Liz, Anke, Outi, Kirsty, Anne, Charlie, Mihaela, Joshua and the rest of the TESS crew. Katja, thank you for providing such an incredibly kind and supportive source of friendship. A very special thank you to Luca who has been a never ending source of wisdom and kindness and who always makes things better just by being there.

Finally, I have been blessed with the unconditional love and support of a bright, caring, witty and kind family that believed in me all along the way. A very special thank you to Kris, Andria, Alli and Brian, Ginny and Ken, Stephen, Sadie, Hazel, Meta and Desmond, Patrick, and Aunt Ruth. To Mom and Dad, there's not enough time or space to try and thank you for all the ways you have supported me and believed in me no matter what. How thankful I am to have such inspiring parents.

And to il mio carissimo *furry friend*, sei stato una fonte infinita di emotional and intellectual support e understanding e mi hai fatto realizzare che araciu araciu e il modo di vivere.

**Funding:** This research was supported by an international fellowship from the Government of Italy for foreign educated researchers. In addition, the fieldwork research was partially supported by the INVALUABLE project (Valuations, Markets and Policies for Biodiversity & Ecosystem Services), funded by the ERA-Net BiodivERsA, and the France's *Agence Nationale de la Recherche* (Convention 2011-EBID-003-01).
