Bureau of the Census

## CITIES AND THEIR SUBURBS.

In its general tables dealing with the population of cities, the Bureau of the Census must necessarily deal with political units, or, in other words, with the population contained within the municipal boundaries of each city. It is a familiar fact that, in some cases, the municipal boundaries give only an inadequate idea of the population grouped about one urban center, and as regards the large cities in very few cases do these boundaries exactly define the urban area. In the case of many cities there are suburban districts with a dense population outside the city limits, which, from many standpoints, are as truly a part of the city as the districts which are under the municipal government. These suburbs are bound to the cities by a network of transportation lines. Many of the residents in the suburbs have their business or employment in the city, and, to a certain extent, persons who reside in the city are employed in the suburbs.

It seems desirable to show the magnitude of each of the principal population centers taken as a whole. Statistics have, therefore, been compiled for each city in the United States with a population of 100,000 inhabitants or more, which, in addition to the population within the city limits, show the population in adjoining communities that may be considered as intimately associated with the urban center. Two sets of computations have been made.

(1) For each city having 100,000 inhabitants or more within its municipal boundaries a computation has been made of the total population in civil divisions within 10 miles of the city boundary. The areas thus mapped out may be briefly defined as "cities and adjacent territory."

(2) In the case of each city having within its own boundaries 200,000 inhabitants or more, the bureau has also mapped out what may be termed a "metropolitan district," which besides the city itself includes only those sections of the adjacent territory which may be considered as urban in character.

**Method of defining districts.**—In laying out the two classes of districts the population is first determined for all civil divisions (that is, cities, towns, boroughs, precincts, etc.) which are located within 10 miles of the city boundaries. Divisions which lie partly within and partly without the 10-mile limit are included if either one-half of their total population or one-half of their total area comes within that limit. State boundaries are disregarded, so that in some cases the adjacent territory and the metropolitan district lie partly in two states. The area within the 10-mile limit thus defined is the "adjacent territory." It is, of course, very different from the territory included within a circle drawn with a radius of 10 miles from the center of the city; nor is it the territory included within a line drawn parallel to the city boundary at an exact distance of 10 miles, because in making up the "adjacent territory" no civil divisions are subdivided. Hence the outline of the area can

not follow geometrical lines, but must conform to the boundaries of the political divisions which are on the outer edge of the included area. Owing to this fact, the boundary of the adjacent territory thus defined may vary considerably from point to point in its actual distance from the city limits.

The "metropolitan district," which, as previously noted, has, as its nucleus, a city of at least 200,000 inhabitants, includes the population and area of the central city itself and of all minor civil divisions lying within the "adjacent territory" except, as a rule, those which had a density of population of less than 150 per square mile. Where the density was less than that the division was considered as rural rather than urban in character, and as not properly a part of the metropolitan district. This limit of density, however, was not always rigidly applied. In some instances for special reasons divisions having a somewhat higher density, perhaps as high as 200 per square mile, have been omitted, and in a few instances a minor civil division has been included within the metropolitan district, even though it had a lower density than that just stated, because that division was completely or almost surrounded by other civil divisions having a density which would require them to be included. The exception in such cases seems justified in order to avoid undue irregularity in the shape of the districts, or gaps lying wholly within their area.

It is safe to say that these deviations from the rule have had very little effect upon the totals finally arrived at and have yielded on the whole as consistent and satisfactory results as would have been obtained by the application of any rigid rule. In fact, absolute exactness in applying a density limit is out of the question because in most cases the area of the minor civil divisions can only be approximated from the available maps and data.

In general, the city with its "adjacent territory," as here defined, includes the central city, and in addition all cities, towns, villages, or other divisions located within 10 miles of the boundary of the central city; while the metropolitan district includes, besides the central city, only those divisions within the 10-mile limit which had a density of population of not less than 150 persons per square mile.

Two special instances of slight exceptions to the application of the definition of metropolitan districts should be mentioned. Since a strict application of the rules for determining the metropolitan district of Boston would give an area almost identical with the area of the "industrial district" of Boston, as laid out in Census Bulletin 101, Industrial Districts for 1905, the latter area is for convenience of comparison considered as the metropolitan district. The same is true of New York City, except that Nassau County, which was not included in the industrial district, has been added to the metropolitan district. In the case of the other industrial districts shown in

## POPULATION.

the bulletin mentioned, the areas were so different from the metropolitan districts as determined by the application of the rule here described, that no attempt was made to secure conformity.

## METROPOLITAN DISTRICTS.

Table 50 shows for 1910 and 1900 the population of the 25 metropolitan districts containing individual cities of 200,000 or more inhabitants, distinguishing

the population lying within the city proper from that outside the city. The districts are arranged in the order of their aggregate population. The table also shows the total population of each city with all its "adjacent territory."

It will be noted that two cities of more than 200,000 inhabitants—Newark and Jersey City—do not appear in the table. They are included within the metropolitan district of New York.

AREA AND POPULATION OF CENTRAL CITY, METROPOLITAN DISTRICT, AND ADJACENT TERRITORY, FOR CITIES OF 200,000 INHABITANTS OR MORE: 1910 AND 1900.

**Boston district.**—Cambridge city, 104,839; Lynn city, 89,336; Somerville city, 77,236; Malden city, 44,404; Salem city, 43,697; Newton town, 39,806; Everett city, 33,484; Quincy city, 32,642; Chelsea city, 32,452; Waltham city, 27,834; Brookline town, 27,792; Medford city, 23,150; Revere town, 18,219; Peabody town, 15,721; Melrose city, 15,715; Hyde Park town, 15,507; Woburn city, 15,208; Framingham town, 12,948; Weymouth town, 12,895; Watertown town, 12,875; Wakefield town, 11,404; Arlington town, 11,187; Winthrop town, 10,132; Natick town, 9,866; Winchester town, 9,309; Dedham town, 9,284; Braintree town, 8,066; Saugus town, 8,047; Norwood town, 8,014; Milton town, 7,924; Marblehead town, 7,338; Stoneham town, 7,090; Swampscott town, 6,204; Belmont town, 5,542; Wellesley town, 5,413; Needham town, 5,026.

The importance of the suburbs of great cities is conspicuously indicated by the combined statistics for the 25 metropolitan districts, which appear at the beginning of the table. The combined population of the metropolitan districts in 1910 was 22,088,331, of which 17,099,904 represents the population of the central cities and 4,988,427 that of the suburban areas, the latter being equal to nearly 30 per cent of the population of the cities proper. The total of 17,099,904 represents the population of 28 "central cities," since there are three metropolitan districts each of which em-

**Pittsburgh district.**—McKeesport city, 42,694; Braddock borough, 19,357; Wilkinsburg borough, 18,924; Homestead borough, 18,713; Duquesne borough, 15,727; McKees Rocks borough, 14,702; North Braddock borough, 11,824; Carnegie borough, 10,009; Sharpsburg borough, 8,153; Jeannette borough, 8,077; Millvale borough, 7,861; New Kensington borough, 7,707; Tarentum borough, 7,414; Swissvale borough, 7,381; Bellevue borough, 6,323; Wilmerding borough, 6,133; Carrick borough, 6,117; Rankin borough, 6,042; Etna borough, 5,830; Knoxville borough, 5,651; St. Clair borough, 5,640; East Pittsburgh borough, 5,615; Glassport borough, 5,540; Coraopolis borough, 5,252; Munhall borough, 5,185.

**St. Louis district.**—Missouri: Wellston city, 7,312; Webster Groves city, 7,080; Illinois: East St. Louis city, 58,547; Granite city, 9,903; Madison village, 5,046.

**San Francisco-Oakland district.**—Berkeley city, 40,434; Alameda city, 23,383; Richmond city, 6,802; San Rafael city, 5,934.

**Cleveland district.**—Lakewood city, 15,181; East Cleveland city, 9,179; Newburgh city, 5,813.

**Cincinnati district.**—Ohio: Norwood city, 16,185; Madisonville city, 5,193; St. Bernard city, 5,002. Kentucky: Covington city, 53,270; Newport city, 30,309; Dayton city, 6,979; Bellevue city, 6,683.

**Detroit district.**—Wyandotte city, 8,287.

**Buffalo district.**—Lackawanna city, 14,549; North Tonawanda city, 11,955; Tonawanda city, 8,290.

**Los Angeles district.**—Pasadena city, 30,291; Long Beach city, 17,809; Santa Monica city, 7,847; Alhambra city, 5,021.

**Milwaukee district.**—West Allis city, 6,645; South Milwaukee city, 6,092.

**Providence district.**—Pawtucket city, 51,622; Warwick town, 26,629; Central Falls city, 22,754; Cranston city, 21,107; East Providence town, 15,808; Cumberland town, 10,107; Lincoln town, 9,825; Johnston town, 5,935; North Providence town, 5,407.

**Washington district.**—Alexandria city (Va.), 15,329.

**Kansas City (Mo. and Kans.) district.**—Rosedale city (Kans.), 5,960.

**Louisville district.**—Indiana: New Albany city, 20,629; Jeffersonville city, 10,412.

braces two cities of such large population that both together are treated as constituting the urban center of the district. The cities are Minneapolis and St. Paul; Kansas City, Kans., and Kansas City, Mo.; and San Francisco and Oakland.

The table shows further that the population of the metropolitan districts outside of the central cities increased between 1900 and 1910 more rapidly than that of the central cities, the increase for the suburban districts being 43 per cent and for the central cities 33.2 per cent. In addition to the strictly urban popu-

## POPULATION.

lation of the 25 metropolitan districts, there were in 1910 nearly 1,000,000 people residing in territory adjacent to the central cities, but not included within the metropolitan districts—that is, in divisions which lie wholly, or in greater part, within 10 miles of the boundaries of the central cities, but in which the density of population was not sufficient to justify calling them strictly urban. The total population of the cities in the 25 metropolitan districts plus that of all their "adjacent territory" was 23,018,533. This, in other words, is the total population which lived in 1910 either in cities of not less than 200,000 inhabitants or within approximately 10 miles of such cities. It constituted 25 per cent of the total population of the United States.

It will be noted from Table 50 that there are great differences among the several metropolitan districts with respect to the proportion which the population outside of the central city represents of the total population of the district. These differences are due to the fact that some of the large cities have made no annexations of territory for many years, while in others extensive annexations have been made, so that most of the densely populated area within the metropolitan district has been added to the city itself. The column in the table giving the area of the various districts shows that there is very little correspondence between the population of the central cities and their area, some cities having several times as many inhabitants per acre as others. The difference in policy with regard to the extension of municipal boundaries makes it the more obviously necessary to exclude thinly settled areas in the neighborhood of the cities in calculating the true metropolitan population; for, in the case of a city which has very extensive boundaries, there is also necessarily a very large area in civil divisions lying within 10 miles of the boundary, and naturally the population of many such divisions is likely to be rural rather than urban in character.

The table emphasizes the well-known fact that most of the large cities of the country have quite a different rank when their suburbs are taken into account from that which they hold when only the population living within their municipal boundaries is considered.

#### CITIES OF 100,000 TO 200,000 INHABITANTS AND THEIR ADJACENT TERRITORY.

Table 51 shows, for each city having from 100,000 to 200,000 inhabitants, the population within the city proper, the population in other civil divisions all or more than half of which (in area or population) lie within 10 miles of the city boundary, and the combined population of the city and such adjacent territory. In three cases, cities of 100,000 to 200,000 inhabitants do not appear in this list because they are adjacent to other cities. This is true of Paterson, N. J., which forms part of the New York district; of Cambridge, Mass., which forms part of the Boston district; and of Oakland, Cal., which forms a part of the San Francisco-

Oakland district, given in Table 50. It will be further noted that in three cases there are one or more cities within the adjacent territory which approximate in population the central city itself. For this reason the names of such smaller cities are inserted in connection with that of the larger city from whose boundaries the distances are determined.

For reasons already stated, it should not be considered that all of the population included in Table 51 is strictly urban in character or that the figures furnish an accurate comparison of the relative importance of the several cities as centers of urban population. Nevertheless, they do indicate the relative importance approximately. The combined population in 1910 of the 19 central cities covered, together with their adjacent territory, was 4,002,285, of which 2,438,878 represents the population in the 19 principal cities themselves and 1,563,407 the population in adjacent territory. It will be noted that the population of the adjacent territory increased less rapidly during the decade than that of the cities themselves.

The fact that the population of the adjacent territory is larger relatively to that of the central cities in the figures given in Table 51 than it is in the case of the larger cities given in Table 50 should not be misunderstood. It does not imply that the smaller cities have relatively more important suburbs than the larger. It is due to two facts, namely, (1) that in the combined area of the city and its adjacent territory, the smaller the size of the city the greater relatively is the share of the adjacent area in the total; (2) that in Table 51 a number of cities are included, principally in New York state and in New England, in whose "adjacent territory" there are other cities of large size which can not in any true sense be considered suburbs. Troy and Schenectady can not be considered as suburbs of Albany, but these three cities combined, together with other adjacent territory, constitute what may in a sense be considered as a single urban community. For convenience in interpreting the table in this respect there is appended to it a note, giving the name and population of each municipality of 5,000 inhabitants or more falling within the territory adjacent to each of the principal cities listed. To what extent any of these outlying cities are to be considered as depending upon the central city or constituting its suburbs, this report does not attempt to discuss.

Table 52 gives a condensed summary of the statistics in Tables 50 and 51. It thus covers 44 districts and shows the total population within the 47 cities which give their names to these districts, and that in adjacent territory within approximately 10 miles of the municipal boundaries. While a considerable number, perhaps in the neighborhood of 2,000,000, of the population thus included, were living under conditions more or less rural, nevertheless the table gives a comprehensive idea of the importance of the great urban centers of the country.

# CITIES AND THEIR SUBURBS.

77

AREA AND POPULATION OF CENTRAL CITY AND OF ADJACENT TERRITORY, FOR CITIES OF 100,000 TO 200,000 INHABITANTS: 1910 AND 1900.

<sup>1</sup> A minus sign (-) denotes decrease.

NOTE.—The following statement gives the name and population of each municipality of 5,000 inhabitants or more falling within the territory adjacent to each of the above cities:

*Albany district.*—Troy city, 76,813; Schenectady city, 72,826; Cohoes city, 24,709;

Watervliet city, 15,074; Rensselaer city, 10,711.

*Scranton district.*—Dunmore borough, 17,615; Carbondale city, 17,040; Pittston

city, 16,267; Old Forge borough, 11,324; Dickson City borough, 9,331; Taylor

borough, 9,060; Olyphant borough, 8,505; Duryea borough, 7,487; Archbald

borough, 7,194; West Pittston borough, 6,548; Blakeley borough, 5,345; Winton

borough, 5,280; Throop borough, 5,133.

*Fall River district.*—New Bedford city, 96,652; Taunton city, 34,259; Fairhaven

town, 5,122.

*Lowell district.*—Massachusetts: Lawrence city, 85,892; Methuen town, 11,448; Andover town, 7,301; Concord town, 6,421; North Andover town, 5,529; Chelmsford town, 5,010. New Hampshire: Nashua city, 26,005.

*New Haven district.*—Ansonia city, 15,152; Naugatuck borough, 12,722; Derby city, 8,991; Wallingford borough, 8,690; West Haven borough, 8,543.

*Worcester district.*—Clinton town, 13,075; Northbridge town, 8,807; Spencer town, 6,740; Grafton town, 5,705; Westborough town, 5,446.

*Birmingham district.*—Bessemer city, 10,864.

*Omaha district.*—Nebraska: South Omaha city, 26,259. Iowa: Council Bluffs city, 29,292.

*Syracuse district.*—Solvay village, 5,139.

*Bridgeport district.*—South Norwalk city, 8,968; Norwalk city, 6,954.

Table 52	Area in acres.	POPULATION.		INCREASE: 1900-1910
		1910	1900	
		Number.	Per cent.	
Total in 44 districts.....	18,293,031.5	27,020,818	20,190,213	33.8
Total in 47 central cities.....	1,454,406.3	19,538,782	14,601,233	33.8
Total in adjacent territory.....	16,838,625.2	7,482,036	5,588,980	33.9

The total population of these districts in 1910 was 27,020,818, which is equal to 29.4 per cent of the total population of the United States. The population of the districts has increased a trifle over one-third during the decade, 1900-1910, it being noteworthy that the percentage of increase in the cities proper was almost precisely the same as that in the adjacent territory.

#### **Appendix 4: European Regional/Spatial Planning Charter (1983)**

EUROPEAN CONFERENCE OF MINISTERS  
RESPONSIBLE FOR REGIONAL PLANNING

6th Session  
Torremolinos (Spain)  
19-20 May 1983

FINAL RESOLUTIONS  
adopted by the Conference

Council of Europe  
Strasbourg  
CEMAT (83) 7

1

**RESOLUTION No.2**  
**ON THE EUROPEAN REGIONAL/SPATIAL PLANNING CHARTER**

The Ministers,

1. Recalling their proceedings and exchanges of views at the London Conference (1980) concerning the preliminary draft of a Charter prepared by the Committee of Senior Officials at the express wish of the Vienna Conference (1978);
2. Welcoming the work accomplished by the Committee of Senior Officials in accordance with Resolution No. 2 adopted in London (1980) ;
3. Thanking the Parliamentary Assembly for its proposal at the Vienna Conference that a Charter be prepared and the Standing Conference of Local and Regional Authorities of Europe for its support and its contributions to this project ;
4. Considering that this Charter will have to serve as a guideline and reference framework for all who bear responsibility for spatial/regional planning in Europe ;
5. Believing that the Charter should initiate a new phase in European co-operation in the spatial/regional planning field and in particular serve as a basis for the work on the preparation of a European Spatial/ Regional Planning Strategy ;
6. ADOPT the appended European Charter on Regional Planning,  
AND PRESENT IT to the people and to those who bear political responsibility at local, regional, national and international level ;
7. REQUEST all institutions, administrations and organisations dealing with spatial/regional planning and management to take its substance into account in their work ;
8. UNDERTAKE to recommend to their respective governments that the principles and aims set forth in the Charter be taken into consideration and that international co-operation be promoted with a view to achieving real European planning

9. REQUEST the Committee of Senior Officials and the national and European authorities concerned to do their utmost to arrange the widest possible distribution for it ;

10. DECIDE to discuss at each plenary session the initiatives taken both in their own countries and at European level to promote the principles set forth in the Charter ;

11. INVITE the Committee of Ministers of the Council of Europe to endorse the text of the Charter.

## APPENDIX TO RESOLUTION No. 2

### **EUROPEAN REGIONAL/SPATIAL PLANNING CHARTER** adopted on 20 May 1983

#### PREAMBLE

The European Ministers responsible for Regional Planning, meeting at their 6th session organised under the auspices of the Council of Europe, considering that :

2. Regional/spatial planning is an important instrument in the evolution of European society and that the intensification of international cooperation in this field represents a substantial contribution towards a stronger European identity ;

3 .cooperation in this field calls for an analysis of national, regional and local development concepts with a view to the adoption of common principles designed particularly to reduce regional disparities and to reach a deeper insight into the use and organisation of space, the distribution of activities, the protection of the environment and the improvement of the quality of life ;

4 the profound changes brought about in the economic and social structures of the countries of Europe and their relations with other parts of the world demand a critical review of the principles governing the organisation of space, to avoid their being wholly determined by short-term economic objectives without taking into consideration social, cultural and environmental aspects ;

5. the objectives of regional/spatial planning need new criteria for the orientation and the use of technical progress, in conformity with economic and social requirements ;

6. - all European citizens should be enabled to participate, in a suitable institutional framework, in the introduction and application of regional/spatial planning measures ;

7. and present it to the people as well as to policy decision-makers at local, regional, national and international level.

#### ADOPT THIS CHARTER

## **THE CONCEPT OF REGIONAL/SPATIAL PLANNING**

8. Regional/spatial planning gives geographical expression to the economic, social, cultural and ecological policies of society.
9. It is at the same time a scientific discipline, an administrative technique and a policy developed as an interdisciplinary and comprehensive approach directed towards a balanced regional development and the physical organisation of space according to an overall strategy.

### **Its European dimension**

10. Regional/spatial planning contributes to a better spatial organisation in Europe and to the finding of solutions for problems which go beyond the national framework and thus aims to create a feeling of common identity, having regard to North-South and East-West relations.

### **Its characteristics**

Man and his well-being as well as his interaction with the environment are the central concern of regional/spatial planning, its aims being to provide each individual with an environment and quality of life conducive to the development of his personality in surroundings planned on a human scale.

12. Regional/spatial planning should be democratic, comprehensive, functional and oriented towards the longer term.

Democratic it should be conducted in such a way as to ensure the participation of the people concerned and their political representatives,

Comprehensive it should ensure the coordination of the various sectoral policies and integrate them in an overall approach,

Functional it needs to take account of the existence of Regional consciousness based on common values, culture and interests sometimes crossing administrative and territorial boundaries, while taking account of institutional arrangements of the different countries,

Long-term it should analyse and take into consideration  
Oriented : the long-term trends and developments of economic, social, cultural, ecological and environmental phenomena and interventions.

### **Its operation**

13. Regional/spatial planning must take into consideration the existence of a multitude of individual and institutional decision-makers which influence the organisation of space, the uncertainty of all forecasting studies, the market pressures, the special features of administrative systems and the differing socio-economic and environmental conditions.

It must however strive to reconcile these influences in the most harmonious way possible.

## **THE FUNDAMENTAL OBJECTIVES**

Regional/spatial planning seeks at one and the same time to achieve:

**14. - Balanced socio-economic development of the regions**

Taking into consideration the economic processes affecting Europe as a whole, the specific regional characteristics and the important role of development axes and communication networks, it should control the growth of regions which are congested or developing too fast, encourage the development of backward regions, and maintain or adapt the infrastructures that are essential to the stimulation of economic recovery in declining regions or those threatened with serious employment problems particularly through manpower migration at European level.

Peripheral areas which have special requirements and structural potential for socio-economic rebalancing should be better linked up to the industrial and economic centres of Europe.

**15. - Improvement of the quality of life**

It encourages improvement in the quality of everyday life, in respect of housing, work, culture, leisure or relationships within human communities, and the enhancement of the well-being of each individual through the creation of jobs and the provision of economic, social and cultural amenities which meet the aspirations of different sections of the population and which are sited in places where they will be used to the optimum.

**16. - Responsible management of natural resources and protection of the environment**

By promoting strategies to minimise conflicts between the growing demand for natural resources and the need to conserve them, it seeks to ensure responsible management of the environment, the resources of land, subsoil, air, water, energy resources, fauna and flora, paying special attention to areas of natural beauty and to the cultural and architectural heritage.

**17. Rational use of land**

In pursuit of the above defined objectives, it is concerned in particular with the location, organisation and development of large urban and industrial complexes, major infrastructures, and the protection of agricultural and forestry land. Every regional/spatial planning policy must be necessarily accompanied by a land-use policy in order to make it possible to achieve objectives which are in the public interest.

**PURSUIT OF REGIONAL/SPATIAL PLANNING**

18. The achievement of regional/spatial planning objectives is essentially a political matter.

19. Many private and public agencies contribute by their actions to developing and changing the organisation of space.

Regional/spatial planning reflects the desire for interdisciplinary integration and coordination and for cooperation between the authorities involved.

20. It seeks coordination between the various sectors This effort for coordination concerns mainly the distribution of population, economic activities, habitat, public

facilities and power supplies ; transport ; water supply and purification noise prevention and waste disposal ; protection of the environment and of natural, historical, cultural assets and resources.

**21. It facilitates coordination and cooperation between the various levels of decision-making and the equalisation of financial resources**

The various authorities involved in regional/spatial planning policy need to be given the power to take and carry out decisions, as well as adequate financial means. In order to ensure optimal coordination between local, regional, national and European levels, also as regards transfrontier cooperation, their action must always take into account any measures introduced or planned at the level above or below their own and, consequently, they must keep one another regularly informed.

- . At local level : coordination of local authority development plans, having regard to the essential interests of regional and national planning;
- . At regional level : the most appropriate level at which to pursue a regional/spatial planning policy, coordination between the regional authorities themselves and local and national authorities as well as between regions of neighbouring countries
- . At national level : coordination of different regional/spatial planning policies and regional aid arrangements as well as harmonisation of the national and regional objectives.
- . At European level : coordination of regional/spatial planning policies in order to achieve objectives of European importance and general balanced development.

**22. Public participation**

Any regional/spatial planning policy, at whatever level, must be based on active citizen participation. It is essential that the citizen be informed clearly and in a comprehensive way at all stages of the planning process and in the framework of institutional structures and procedures.

**STRENGTHENING EUROPEAN COOPERATION**

**23. The European Conference of Ministers responsible for Regional Planning (CEMAT) constitutes the ideal political instrument for cooperation and initiative at European level.**

- It will intensify relations with the bodies of the Council of Europe and the European Community, as well as with the relevant intergovernmental organisations. It will present regular progress reports on European cooperation in this field to the Parliamentary Assembly and the Standing Conference of Local and Regional Authorities of Europe.
- Besides organising and intensifying political cooperation between States, it will promote cooperation in the main technical planning fields such as long-range forecasting, regional statistics, cartography and terminology. It must acquire the scientific, administrative, technical and financial tools essential to the pursuit of its aims, in particular by drawing up a European regional planning concept.

**24. The Ministers ask all institutions, administrations and organisations dealing with regional planning problems to have regard in their work to the contents of the Charter.**

25. The Charter can be revised with a view to adapting it to the needs of European society.

26. The Ministers undertake to recommend to their respective governments that the principles and aims set forth in the Charter be taken into consideration and that the international cooperation be promoted with a view to achieving real European planning.

## A P P E N D I X

### SPECIFIC OBJECTIVES

All principles set down in the present Charter have already been developed in the work of the European Conference of Ministers responsible for Regional Planning on rural, urban, frontier, mountain and coastal areas and on islands.

1. Rural areas with a primarily agricultural function have a fundamental role to play. It is essential to create acceptable living conditions in the countryside, as regards all economic, social, cultural and ecological aspects as well as infrastructures and amenities, while distinguishing between under-developed and peripheral rural regions and those close to large conurbations.

In such areas the development of the urban framework, of social and economic structures and of transport must take account, in all spheres, of their specific functions and in particular of the conservation and management of the natural landscape.

2. Urban areas contribute greatly to the development of Europe and usually present the problem of controlling their growth.

A balanced urban structure requires the systematic implementation of plans for land use and the application of guidelines for the development of economic activities for the benefit of the living conditions of town dwellers.

Special attention should be paid to the improvement of living conditions, the promotion of public transport and to all measures to curb the excessive movement of population away from the town centres to the periphery.

The rehabilitation of the architectural heritage, monuments and sites must be an integral part of an overall town and country planning policy.

3. Frontier areas, more than all others, need a policy of co-ordination between States. The purpose of such a policy is to open up the frontiers and institute transfrontier consultation and co-operation and joint use of infrastructure facilities. States should facilitate direct contacts between the regions and localities concerned in accordance with the European Outline Convention on transfrontier co-operation between territorial authorities in order to promote increasingly close contacts between the populations concerned.

In the frontier areas, no project which could have harmful consequences for the environment of neighbouring countries should be carried out without previous consultation of those States.

4. Mountain areas : In view of the importance of these areas for the ecological,

economic, social, cultural and agricultural functions they fulfil and their value as depositories of natural resources, and of the many constraints from which they suffer in these fields of activity, spatial management policy must give special and suitable consideration to the preservation and development of mountain regions.

5. Regions with structural weaknesses where living and working conditions have made little progress, particularly for historical reasons, or which could be left behind by changes in their economic base, need special assistance related to the disparities which exist between living and working conditions within the various States.

6. Regions in decline : Specific policies should be developed in favour of regions where economic activity has strongly slowed down following industrial restructuring and ageing of their infrastructure and of their industrial equipment, very often monostructured. This situation is accelerated by the worldwide competition resulting from the new international division of labour.

7. Coastal areas and islands : The development of mass tourism and transport in Europe and the industrialisation of coastal areas, islands and the sea, demand specific policies for these regions in order to ensure their balanced development and co-ordinated urbanisation, bearing in mind the requirements of environmental conservation and regional characteristics. Regard must be given to the specific role and functions of coastal areas in the land-sea relationship and of sea-transport possibilities.

Appendix 5: Territorial Agenda of the European Union adopted on 25 May 2007

## **Territorial Agenda of the European Union**

### ***Towards a More Competitive and Sustainable Europe of Diverse Regions***

Agreed on the occasion of the  
Informal Ministerial Meeting on Urban Development and Territorial Cohesion  
in Leipzig on 24 / 25 May 2007

#### **I.**

##### **Future Task: Strengthening Territorial Cohesion**

(1) The EU looks with confidence at the progress achieved in economic, social and ecological terms. Together the EU Member States operate a combined economy, which is about one third of the world-wide Gross Domestic Product. It is this economic power as well as a territory covering more than 4 million km<sup>2</sup> and a population of 490 million inhabitants in a variety of regions and cities, which characterises the territorial dimension of the EU.

(2) We, as Ministers responsible for spatial planning and development, present the Territorial Agenda as an action-oriented political framework for our future cooperation, developed together with the European Commission. Through the Territorial Agenda we are contributing to sustainable economic growth and job creation as well as social and ecological development in all EU regions. We are hereby supporting both the Lisbon and the Gothenburg Strategies of the European Council, which are complementary strategies.

(3) Through the Territorial Agenda we would like to promote a polycentric territorial development of the EU, with a view to making better use of available resources in European regions. An important aspect is the territorial integration of places where people live. In this way we will contribute to a Europe which is culturally, socially, environmentally and economically sustainable. It is particularly important to better integrate our newer Member States into this policy of polycentric settlement development. Through the Territorial Agenda we will help – in terms of territorial solidarity – to secure better living conditions and quality of life with equal opportunities, oriented towards regional and local potentials, irrespective of where people live – whether in the European core area or in the periphery.

(4) We see the future task "Territorial Cohesion" as a permanent and cooperative process involving the various actors and stakeholders of territorial development at political, administrative and technical levels. This cooperation is characterised by the history, culture and institutional arrangements in each Member State. EU Cohesion Policy should be able to respond more effectively than it has done so far to the territorial needs and characteristics, specific geographical challenges and opportunities of the regions and cities. That is why we advocate the need for the territorial dimension to play a stronger role in future Cohesion Policy in order to promote economic and social wellbeing.

(5) Territorial Cohesion can only be achieved through an intensive and continuous dialogue between all stakeholders of territorial development. This process of cooperation is what we call territorial governance. The private sector (especially locally and regionally based entrepreneurship), the scientific community, the public sector (especially local and regional authorities), non-governmental organisations and different sectors need to act together in order to make better use of crucial investments in European regions and contribute to tackling climate change.

(6) The Territorial Agenda presents the product of our cooperation. At our Informal Ministerial Meeting held in Rotterdam (2004) we agreed upon a territorial development policy to better assess the perspectives of the EU. And in Luxembourg (2005) we accepted territorial priorities as the basis of our future common activities and the formulation of an expert report on "The Territorial State and Perspectives of the European Union" which provides the basis for the Territorial Agenda. Our elaboration of the Territorial Agenda is being supported by a

Europe-wide stakeholder dialogue, ongoing since summer 2006. Based on articles 2, 6, 16 and 158 included in the EC Treaty, territorial cohesion has been considered as the third dimension of Cohesion Policy. It has been taken up, for example, in the Third and also the Fourth Cohesion Report as well as in the Strategic Guidelines for Cohesion adopted in 2006. We affirm our commitment to working even more closely together and with the EU institutions in pursuit of this goal – independent of the ongoing discussion about the EU's reform process (EU Constitutional Treaty).

## II.

### New Challenges: Strengthening Regional Identities, Making Better Use of Territorial Diversity

(7) We are facing major new territorial challenges today. These include:

- regionally diverse impacts of climate change on the EU territory and its neighbours, particularly with regard to sustainable development,
- rising energy prices, energy inefficiency and different territorial opportunities for new forms of energy supply,
- accelerating integration of our regions, including crossborder areas, in global economic competition, and at the same time increasing dependencies of states and regions in the world,
- impacts of EU enlargement on economic, social and territorial cohesion, particularly with regard to the transport and energy infrastructure related integration of Eastern Europe and the new EU Member States as well as their regions,
- overexploitation of the ecological and cultural resources and loss of biodiversity, particularly through increasing development sprawl whilst remote areas are facing depopulation,
- territorial effects of demographic change (especially ageing) as well as in and out migration and internal migration on labour markets, on the supply of public services of general interest as well as the housing market, the development of the settlement structure and how people live together in our cities and regions.

(8) Given these challenges, we firmly believe that territorial cohesion of the EU is prerequisite for achieving sustainable economic growth and implementing social and economic cohesion – a European social model. In this context, we regard it as an essential task and act of solidarity to develop preconditions in all regions to enable equal opportunities for its citizens and development perspectives for entrepreneurship. We agree that regional identities and potentials, needs and diverse characteristics of the regions, cities and villages of Europe gain meaning through a policy of territorial cohesion and through other regional development policies.

(9) Through the Territorial Agenda we are also helping to strengthen the global competitiveness and sustainability of all regions of Europe. This is in accordance with the renewed Lisbon Strategy agreed by Member States in 2005. The diverse territorial potentials of regions for sustainable economic growth and job creation in the EU must be identified and mobilised. Every region and city may, through their engagement, contribute to saving energy and to its decentralized supply and to mitigating climate change, e.g. by supporting the development of low or zero-emissions settlements, developing potential new renewable sources of energy supply and promoting energy efficiency particularly of the building stock. Our cities and regions need to become more resilient in the context of climate change. They should be firmly bound into governance processes for implementing the Lisbon Strategy as well as into National Reform Programmes.

(10) We wish to highlight the increasing territorial influence of Community policies. This should be taken into consideration as on the one hand EU policy-making should have more regard to local, regional and national potentials and the motives of stakeholders by taking a strategic integrated territorial development approach. On the other hand, individual city and

regional development strategies should explicitly take more account of their national and European contexts. It is important that national, regional and local concerns closely intertwine with EU policies. This applies particularly to rural development policies, environmental and transport policies as well as EU Cohesion Policy.

(11) The Leipzig Charter on Sustainable European Cities complements the concern of the Territorial Agenda as it raises integrated urban development policy as a task with a European dimension. Therefore, integrated urban development policy and territorial cohesion policy each make complementary contributions to implementing the aims of sustainable development.

### III.

#### **Territorial Priorities for the Development of the European Union**

(12) The Territorial Agenda builds upon the three main aims of the European Spatial Development Perspective (ESDP), which remains valid, namely

- development of a balanced and polycentric urban system and a new urban-rural partnership;
- securing parity of access to infrastructure and knowledge;
- sustainable development, prudent management and protection of nature and cultural heritage.

It also builds on the CEMAT Guiding Principles for Sustainable Spatial Development of the European Continent confirmed by the Committee of Ministers of the Council of Europe. Based on these principles we also want to intensify the dialogue with neighbouring countries adjoining the EU.

(13) In the context of our policy for territorial cohesion we commit ourselves to the following priorities for territorial development in the EU:

##### 1.

###### **We Aim to Strengthen Polycentric Development and Innovation through Networking of City Regions and Cities**

(14) City regions and cities of varying size are best able to build upon their own strengths in the context of a Europe-wide cooperation with entrepreneurs as well as societal and political stakeholders. If they succeed in implementing networks in a polycentric European territory in an innovative manner, they will create conditions to allow them to benefit global competition in terms of their development.

(15) Cities which function as regional centres should cooperate as parts of a polycentric pattern to ensure their added value for other cities in rural and peripheral areas as well as for areas with specific geographic challenges and needs (e.g. structurally weak parts of islands, coastal zones and mountainous areas). To facilitate this process, infrastructure networks within and between regions in Europe need to be extended and updated on a continuous basis. We therefore support European cooperation between city regions as well as with small and medium-sized towns at the internal borders and also beyond the external borders of the EU.

##### 2.

###### **We Need New Forms of Partnership and Territorial Governance between Rural and Urban Areas**

(16) A competitive and sustainable Europe comprises in great variety and with different interdependences city regions of varying size and rural areas. City regions are thereby surrounded by urban centres and rurally characterised areas; rural areas beyond the direct commuting distance of city regions are surrounded by regional centres and small and

medium-sized towns. The respective authorities should, as inter-dependent partners, identify their common assets, elaborate joint regional and sub-regional development strategies and in this way jointly lay the foundation for making regions and sub-regions attractive and for enabling investment decisions both by the private and public sector. This is what we call urban-rural partnership.

(17) Regionally oriented investment decisions should be prepared jointly by public and private stakeholders. In this context, it is necessary if, for example, local authorities of varying size form voluntary associations for joint marketing and developing joint strategies to tackle common problems. Against the background of demographic change, authorities facing population loss of young people need to cooperate closely to enable them to maintain attractive services and infrastructure. This cooperation implies a new political dimension. To strengthen this, new forms of territorial governance arrangements may be necessary in European regions. Generally speaking, we would like to create opportunities for innovative economic potential for development, building upon experiences of successful partnership and political cooperation in a functional regional context, also including crossborder areas. We therefore support positive competition between cities and regions.

### 3.

#### **We Want to Promote Regional Clusters of Competition and Innovation in Europe**

(18) Growth zones should be enlarged beyond the economic core area of the EU through a policy of cooperation and networking. One way of combining strengths can be through the creation of suitable and innovative clusters where the business community, the scientific community and administrations work together. This also applies across internal and external borders with our neighbours.

(19) City regions of varying size, small and medium-sized towns as well as rural areas are encouraged, to cooperate with other authorities, even in other countries, in order to strengthen their international identity and specialisation as a way of becoming more attractive for investment. It is reasonable to focus on existing centres of innovation.

### 4.

#### **We Support the Strengthening and Extension of Trans-European Networks**

(20) Mobility and accessibility are key prerequisites for economic development in all regions of the EU. To meet the requirements for mobility in a polycentric European territory, including our neighbouring countries, and to contribute to enhancing the urban environment, it is important to secure integrated and sustainable development of multi-modal transport systems. We need capable networks both for passengers and goods, of rail, road and air (including networks of viable regional airports), efficient maritime, coastal and inland waterways, and secondary networks linking with respective hinterland areas as well as crossborder transport management. We support the removal of barriers to crossborder rail and road transport and particularly support the use of telematic measures to assist the operation of overloaded parts of road networks.

(21) We support an unhampered and socially fair access to information and communication technologies in all regions, to remove territorially induced barriers to accessibility, especially in peripheral and rural areas, and to enable decentralised working and adequate provision of services of general interest, including health care and education. In order to secure the necessary infrastructure, such as achieving general coverage for broadband connections, considering respective demand, we recommend combining infrastructure such as broadband cables in new transport and communication programmes.

(22) Rising energy demand in the face of limited reserves of non-renewable energy sources, and a growing dependence of the EU on imported energy as well the challenge of climate change, means that we should further explore and develop opportunities for decentralized, efficient, safe and environmentally friendly production of renewable energy, which is as yet

underutilised. In order to make better use of regional potentials in this field, which might generate opportunities particularly in rural areas, we recommend further strengthening networks and harmonising conditions for the energy sector.

## 5.

### **We Promote Trans-European Risk Management including the Impacts of Climate Change**

(23) Joint transregional and integrated approaches and strategies should be further developed in order to face natural hazards, reduce and mitigate greenhouse gas emissions and adapt to climate change. Further work is required to develop and intensify territorial cohesion policy, particularly with respect to the consequences of territorially differentiated adaptation strategies.

(24) In order to improve the efficiency of risk management activity and to guide development appropriately, integrated trans-European and crossborder strategies (e.g. flood protection, drought and desertification prevention, integrated coastal zone and mountainous areas management, technological hazard management, improved forecasting), should be adopted, in cooperation with our neighbouring countries, and new forms of risk governance arrangements should be developed, especially in multi-hazardous areas like coastal zones, lakesides, maritime and river basins and mountainous areas.

## 6.

### **We Require the Strengthening of Ecological Structures and Cultural Resources as the Added Value for Development**

(25) The irreplaceable values of European ecological structures and cultural and natural heritage, especially cultural landscapes and the quality of design and process on architecture as well as the built environment, should constitute, against the background of the respective regional circumstances and potentials, the foundation for environmentally and culturally-oriented development which offers development perspectives, whilst safeguarding diverse cultural identities, particularly in regions that are lagging behind or undergoing structural changes. Coordinated transnational interventions and associated management should promote cultural routes and networks as well as other territorial projects of natural and cultural significance.

(26) We advocate further developing networks of valuable nature areas and cultural landscapes in order to create an integrated and sustainable trans-European green structure with adequate corridors and zones linking protected sites and other areas of European and national importance.

(27) Integrated territorial development policies should also be strengthened in ecologically or culturally fragile areas of the EU in order to address the key challenge of reconciling economic development and environmental, social and cultural sustainability.

## IV.

### **Implementing the Territorial Agenda**

(28) In order to better incorporate the six territorial priorities in political debates and decision making processes we consider the following actions to be important and recommend them for implementation between 2007 and 2011. We commit ourselves to delivering these actions:

#### 1.

##### **Actions by the European Institutions**

(29) We welcome the Communication of the European Commission on "The Contribution of Cities to Growth and Employment in Regions" and ask the European Commission to work on a follow up in view of the Territorial Agenda.

(30) We ask the European Commission to continue to include explicit reference to the territorial dimension of the EU in future Reports on Social and Economic Cohesion to activate cities and regions to bring in their development strategies in the European context. This would help to realise the principle of subsidiarity.

(31) We request the Regional Development Committee of the European Parliament, the Territorial Cohesion Committee of the Committee of the Regions and the European Economic and Social Committee to support and implement the priorities of the Territorial Agenda in their activities, thus giving cities and regions a stronger role in implementing EU Policies.

## 2.

### **Actions for Close Cooperation Between the European Commission and EU Member States**

(32) We recommend a continuous and in-depth dialogue between EU Member States (including regional and local authorities) and the European Commission on strategic territorial development issues. The opportunities provided by the existing committees (particularly the Expert Committee "Territorial Cohesion and Urban Matters" which was established by the Committee of the Coordination of Funds [COCOF]) should be used efficiently for this purpose.

(33) We ask the European Commission and other European institutions to initiate a dialogue with Member States, based on the principles of subsidiarity, to discuss how the effects of European legislation on sustainable urban and territorial development and planning can be assessed and taken into account and how to improve the coordination of EU policies and initiatives that concern territorial policy areas. This assessment and coordination could take place within the framework of the existing institutions and procedures.

(34) We recommend that the ESPON 2013 Programme, in close cooperation with the European Commission undertake a more in-depth analysis of the effects of EU Policies on territorial cohesion, reveal cause-and-effect relationships and develop operational indicators for a regular reporting on territorial matters. In this context it is important for the ESPON and URBACT programmes and Urban Audit to cooperate closely.

(35) We consider the cooperation, including our neighbouring countries, in the context of EU Programmes for European Territorial Cooperation (Objective 3) to be new and future-oriented funding instruments offering opportunities for strengthening European networks of cities and regions as well as supporting new innovation-oriented European development corridors. We ask the European Commission to support us in developing interregional, crossborder and transnational cooperation as an effective instrument for promoting territorial cohesion.

## 3.

### **Actions for Strengthening Territorial Cohesion in EU Member States**

(36) We will commit ourselves, within our competences, to integrate the political priorities of the Territorial Agenda as well as the territorial aspects of the Community Strategic Guidelines on Cohesion Policy 2007-2013 in national, regional and local development policies. In view of the conclusions of the Seminar on Governance of Territorial Strategies, held under the Austrian EU Presidency in June 2006 in Baden, we recommend integration of the territorial dimension in the strategic processes underpinning cohesion policy at EU and national level.

(37) We will ensure that, within the terms of our respective national institutional arrangements, we engage in transparent decision-making processes with public and private stakeholders as well as non-governmental organisations in developing territorially relevant policies, territorial priorities and actions for their implementation.

#### 4. Joint Activities by Ministers

(38) In order to implement the Territorial Agenda we agree to maintain informal structures for cooperation between our ministries, including the respective EU Presidencies, and with the European Parliament, the European Commission, the Committee of the Regions, the European Economic and Social Committee and the European Investment Bank. This requires smooth functioning of the Presidencies Group equipped with adequate secretarial resources and supported by the services of experts, additionally from other Member States.

(39) We agree to act jointly in order to continue and strengthen cooperation among ourselves and with the European Commission through a network of territorial cohesion related contact points. We intend the open Territorial Agenda Working Group, consisting of EU Member States and the European Commission, to continue its work in the current phase of implementing the Agenda.

(40) As a first step in our joint activities and as follow-up to the 2007 spring European Council we commit ourselves, within our competences, to contribute to a sustainable and integrated climate and energy policy in the EU.

(41) Our further joint activities will be focused on facilitating the EU-wide debate on EU key dossiers from a territorial point of view. The most important ones include:

- the debate on the Lisbon process post 2010,
- the 2010 midterm review of Cohesion Policy,
- the 2010 midterm review of the EU Rural Development Policy,
- the 2011 redevelopment of the EU Sustainable Development Strategy (SDS),
- the ongoing debate of how to implement the recommendations of the Green Paper on Maritime Policies,
- the ongoing debate on the 7th Environmental Action Programme of the EU,
- the debate on the Transport Policy post 2010,
- the ongoing debate on the Research and Innovation Policy,
- the ongoing debate on the Neighbourhood Policy.

(42) We ask the coming EU Presidencies together with all EU Member States, the European institutions, including the European Commission and the European Investment Bank as well as other stakeholders to implement the actions set out in this Territorial Agenda. We welcome the initiative of the Portuguese EU Presidency to facilitate the implementation of the Territorial Agenda by working out the first Action Programme as well as the will of the Slovene EU Presidency to initiate its implementation through its activities.

(43) We ask the Slovene EU Presidency to take the Territorial Agenda into account in their preparations for the 2008 spring European Council with view to achieving a stronger and more formal political recognition of the territorial conditions for the development of regions and cities and new forms of participation with EU decisions.

(44) We agree that there is a need to encourage public and private stakeholders of territorial development to be engaged in addressing territorial cohesion of the EU. Their specific interests should be recognised. A joint discussion about scenarios for the territorial development of Europe may ease the process of reconciling different interests. We ask the coming EU Presidencies to elaborate this ambition through specific activities in accordance with topical needs for policy development in Europe. We welcome both the initiative of the Portuguese EU Presidency to organize an Informal Ministerial Meeting to be held in

November 2007 and of Germany to organize a Conference on Territory and Economy to be held in spring 2008.

(45) We ask the coming Hungarian EU Presidency to evaluate and review the Territorial Agenda in the first half of 2011.

(46) We consider it our political task to raise awareness for the most important territorial challenges for the EU and we will therefore play an active role in implementing the Territorial Agenda at the European level and within our states. We are convinced that through the Territorial Agenda we are taking a further step towards a competitive and sustainable Europe of diverse regions and active citizens.
