

Table of contents

<i>Chapter 1. General introduction</i>	1
1.1. Organometallic chemistry and homogeneous catalysis	1
1.2. Alkene polymerization reactions	4
1.3. Alternating copolymerization of alkenes with carbon monoxide	5
1.3.1. Copolymerization of ethene with carbon monoxide	7
1.3.2. Copolymerization of styrene with carbon monoxide	14
1.4. Terpolymerization of styrene and ethene with carbon monoxide	19
1.5. References	20
 <i>Chapter 2. Scope and objectives of the thesis</i>	 29
 <i>Chapter 3. Bis-(thio)ethers as chelating ligands for the Pd-catalyzed alternating CO/4-tert-butylstyrene copolymerization</i>	 33
3.1. Introduction	34
3.2. Results and discussion	36
3.3. Conclusions	42
3.4. Experimental	42
3.5. References	47
 <i>Chapter 4. Pyrazol-containing catalysts for the alternating copolymerization of CO/4-tert-butylstyrene</i>	 51
4.1. Introduction	52
4.2. Results and discussion	54

4.3. Conclusions	60
4.4. Experimental	61
4.5. References	66
<i>Chapter 5.</i>	69
<i>5.1 Influence of pyridine-imidazoline ligands on the reactivity of palladium-methyl complexes with carbon monoxide</i>	69
5.1.1. Introduction	71
5.1.2. Results and discussion	74
5.1.3. Conclusions	101
5.1.4. Experimental	102
5.1.5. References	117
<i>5.2 Modular pyridine-imidazolines as ligands for the CO/4-tert-butylstyrene copolymerization</i>	121
5.2.1. Introduction	123
5.2.2. Results and discussion	128
5.2.3. Conclusions	155
5.2.4. Experimental	156
5.2.5. References	172
<i>Chapter 6. Terpolymerization of 4-tert-butylstyrene and ethene with carbon monoxide using N-ligands</i>	177
6.1. Introduction	178
6.2. Results and discussion	181
6.3. Conclusions	195
6.4. Experimental	196
6.5. References	199
